What is a PictureBox?

- The **LinkLabel** control in C# is an enhanced version of the regular Label control
- It is used to display **text that behaves like a hyperlink**, commonly used for:
 - Opening a web page
 - Sending an email
 - Navigating to another form or section of the application
 - Linking to documentation or files

Common Properties

| Property | Description |
|-------------------------|---|
| LinkColor | The color of the hyperlink text |
| VisitedLinkColor | Color used after a link is clicked |
| LinkBehavior | Defines how the underline appears (AlwaysUnderline, HoverUnderline, NeverUnderline) |
| Visited | Indicates whether a link has been clicked |
| Text | The text displayed on the label |

Opening a Website

```
System.Diagnostics.Process.Start("https://www.microsoft.com");  
linkLabel1.LinkVisited = true;
```

Prepared BY: M. A. Wahid
